

Team Capacity Retainer

Ongoing access to an experienced technology team

Expand your technology capacity without having to recruit and manage every capability internally.

Through a fixed number of hours reserved each month, you gain ongoing access to expertise across software development, AI, technical strategy, architecture and design.

The model is designed for companies that need additional capacity across software development, AI, technical strategy, architecture and design, without having to build every capability internally.

A stable core team develops an increasing understanding of your business and technology, reducing repeated onboarding and improving continuity over time.

Expertise available to your team:

The reserved monthly capacity can be allocated across:

- software development;
- AI solutions and integrations;
- technical strategy and consulting;
- software architecture;
- UX and interface design;
- manual quality assurance.

When this model is a good fit

The Team Capacity Retainer is designed for companies that:

- need additional capacity for an existing technology team or product;
- need expertise that is not consistently available in-house;
- want to move several technical initiatives forward without hiring multiple specialists;
- require support with technical decisions, architecture or coordination;
- want to develop or integrate AI capabilities;
- prefer the continuity of one technology partner over coordinating several separate providers.

Key benefits

Fixed and predictable monthly capacity

A predefined number of team hours is reserved for your company every month, making technical capacity easier to plan and manage.

Access to multiple capabilities

Access several areas of expertise through one engagement, without sourcing and coordinating separate specialists for each need.

Flexibility across services

Allocate the fixed monthly capacity across the agreed service areas during monthly planning, based on your current priorities.

Continuity and accumulated context

A stable core team remains involved over time and develops a stronger understanding of your product, business, technical environment and working processes.

One point of contact

Work through one consistent point of contact, reducing coordination effort and maintaining clear visibility over priorities, capacity and progress.

Reduced hiring and coordination effort

You gain access to a broader range of expertise without recruiting and managing several separate internal roles or external specialists.

How the collaboration works

Initial alignment

Align your business priorities, technology context and existing team with the way the collaboration will operate.

Monthly planning

Agree and prioritise the activities to be covered within the fixed monthly capacity.

Team coordination

Work through one consistent point of contact, while the required expertise is coordinated within the Genuineq team.

Ongoing collaboration

Integrate the collaboration into your existing communication, project management and technical processes.

Regular checkpoints

Maintain visibility over progress, capacity and upcoming priorities through regular checkpoints agreed with your team.

Engagement options

Core Capacity 40 hours per month	Growth Capacity 80 hours per month	Extended Capacity 160 hours per month
Suitable for companies that need limited but consistent access to technology expertise and implementation support.	Suitable for companies with recurring technology needs across several areas of expertise.	Suitable for companies that need significant ongoing capacity across multiple technology priorities.

The number of monthly hours is fixed according to the selected package and functions as a monthly team retainer.

Technology focus

This engagement is primarily designed for companies working with:

- Laravel and PHP
- Vue.js and Nuxt
- AI technologies and integrations

Engagement period and commercial terms

The minimum initial engagement period is three months.

For companies looking for a stable, long-term technology partnership, an initial six-month collaboration is recommended.

About Genuineq

Genuineq is a technology partner for companies building and evolving digital products with Laravel, Vue and AI. Our multidisciplinary approach gives clients access to both hands-on implementation and the broader technical expertise required to make informed decisions and move initiatives forward.
